

The University of Dallas and IP3, Inc are partnering to provide two types of CISSP® (Certified Information Systems Security Professional) training environments to prepare you for the exam...

The CISSP® **Boot Camp** is a live, onsite, groundbreaking, five-day, comprehensive, hard-hitting course; covering the IT security Common Body of Knowledge (CBK). This IT certification is recognized around the world

As an **added bonus**, you are automatically enrolled for 1 year of access (pre and post Boot Camp) to our innovative and comprehensive On-Line live instructor- led CISSP® training sessions (Monday and Wednesday each week with reviews and practice tests each Friday). This is a 10 week revolving course which allows you to join in at anytime, before and after the boot camp!

Unlike other CISSP® training programs, IP3 provides you with the materials to fully prepare for class through our comprehensive study pack; consisting of self-study manuals, professional online mentoring, video/audio trainings, study guides and on-line instructor support. The program can begin with access to our Live online sessions or archived classes so you can gain the knowledge and expertise to come prepared for the course; or you can go directly to the on-site training and use the on-line access for added post boot camp support. All training includes live interactions with other students and an expert instructor.
